Civil Protection and Hazard Management Stakeholders (Registered Members)

A few words about our Network

The Greece-Albania Cross-border Network of Civil Protection Stakeholders is an initiative of the Project "Public awareness, Preparedness, Participation and Coordination for Civil Protection for All", also known by its acronym "4PLUS", which is co-funded by the European Regional Development Fund and by national funds of the countries participating in the Interreg IPA II Cross-Border Cooperation Programme "Greece-Albania 2014-2020".

The main objective of 4PLUS is to promote the joint development of "Inclusive" practices for effective civil protection of disaster management in the cross-border area of Greece-Albania.

4PLUS is expected to act catalytically towards the development of **new and improved preparedness and reaction plans** that better integrate and address the needs of persons with disabilities and senior persons in the cases of natural and manmade crises and disasters.

This Network is one of the various initiatives of 4PLUS that aim at improving the communication, cooperation and coordination among all contributing sectors and stakeholders towards achieving more inclusive risk reduction results.

Our vision is to evolve this Network into an institutional, multi-sectorial, multi-level assembly of authorities, agencies, NGOs involved in civil protection, associations of the elderly and the disabled, etc., that will be dedicated to identifying existing inequalities and to developing more inclusive practices for all.

This website serves as the **online registry for the Network members**, where all devoted stakeholders can meet, exchange information, including classified information and data, and work in consultation on topics of common interest. A public area is also foreseen for making widely available non-classified information of public interest, while the restricted area is limited to the registered members only.

Contrast is not tested when background gradients, transparency, etc. are present. A CSS background color that provides sufficient contrast must be defined when a background image is in place. This provides fall-back contrast in case images or CSS do not display.
